**FOR IMMEDIATE RELEASE**

**OHIO GRATINGS, INC. NOW MANUFACTURES**  
**PRESS LOCK GRATING IN THE U.S.**

Canton, Ohio -- March 26, 2007 -- Ohio Gratings, Inc. (OGI) announces the manufacturing of a new product line called Press Lock Grating. This new product line offers additional benefits from the traditional weld-forge bar grating. Within the manufacturing process, press lock offers flexibility to the end user based on the spacing and load requirements. Bar spacings are available in increments of 7/16" in either direction making it ideal for standard flooring applications as well as a multitude of other applications.

Press Lock Bar Grating is used for all types of industrial, commercial and architectural applications. It is perfect for mezzanine walkways for the material handling market because the press lock bars can be assembled closer together for greater foot comfort. The flush top design allows for a smoother rolling surface for push carts which are often used in distribution centers and warehouses. It is also ideal for many architectural applications such as building facades, fencing, sunscreens, security barriers, handrail infills, plus ADA walkways and almost any other grating application. It is available in carbon, stainless steel and aluminum but other materials can be used as well. For applications where there is a danger of skidding or slipping, Ohio Gratings, Inc. offers serrated bearing bars or cross bars.

Ohio Gratings, Inc. headquarters and 160,000 sq. ft. manufacturing facility are located at 5299 Southway St., SW, Canton, OH. They also have a second 15,000 sq. ft. facility in Ridgeland, SC that offers an array of grating products and services including an inventory of light duty steel and aluminum. This facility also provides fabrication services from end banding to the most complex fabrication request. Since 1970 OGI has manufactured quality bar grating.

From traditional industrial flooring to architectural applications, OGI offers extensive design and custom fabrication services, engineering support, budget estimates for your projects and shop drawings. They operate in accordance to ANSI (American National Standards Institute) and NAAMM

(National Association of Architectural Metal Manufacturers) standards. Some applications of the OGI bar grating include entranceways, sun screens, vent grilles, handrail panels ceiling tiles, security screens, visual barriers, fences, trenches, pump & lift stations and water & wastewater treatment plants.
