

Shelf Grating

Benefits

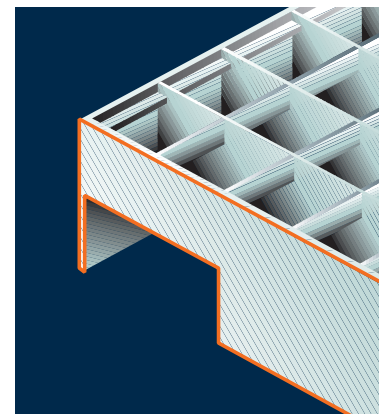

Used in the construction of high rack systems, grating based shelves have key advantages compared to other shelf systems.

- High load capacity
- Visibility of product on shelf
- Water can penetrate easily through the mesh in the event of a fire
- Extra-high banding restricts items from falling off shelves
- Utilizing steel provides a strong, yet lightweight option
- Angle collar or notching secures the shelving in place

Angle collar

Angles can be welded on to one or several edges. Angle height should be at least the same as the bearing bar.

Notching

Special notching with extra-high banding in the shelving area.
